

Plant piping

DHF's weldless Piping System induction bends are used in piping in petrochemical plants, waste treatment plants and others.

The induction bends can bend pipes the same radius as long elbows.

The system also minimizes the wall thickness reduction ratio.

DHF's weldless Piping System is far more economical compared with conventional methods.

Pneumatic piping

LR (Long Elbow) pipe

LR (Long Elbow Radius) manufacturing range

Material	Carbon steel pipe
Size	4" - 14"
